TASHI

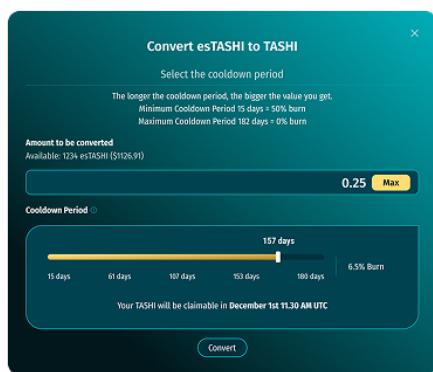

Location: US + Remote

Touch Point: UIUX - 360 Branding

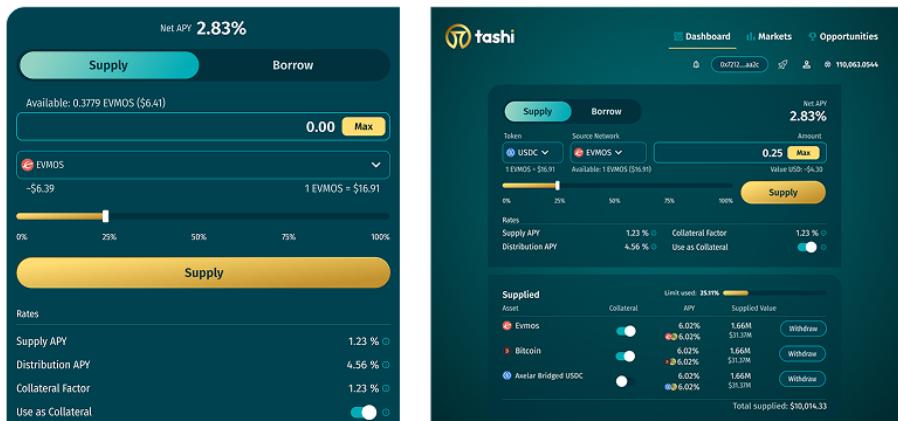

My core responsibilities would revolve around product itself (UIUX), visually communicating the brand's value to its target audiences typically include: Branding & Visual Identity, Marketing Collateral, Web & Product Marketing, Social Media & Campaigns and Event & Employer Branding

The screenshot shows the Tashi platform's supply and borrow interface. At the top, there are tabs for Dashboard, Markets, Opportunities, and a search bar. The main area is divided into Supply and Borrow sections. In the Supply section, a user is supplying USDC for EVMOS. The Net APY is 2.83%. The user has supplied 0.25 USDC, which is equivalent to 1 EVMOS (\$16.91). The collateral factor is 1.23%, and the distribution APY is 4.56%. The user has chosen to use the collateral. In the Borrow section, the user can borrow EVMOS. The available amount is 1 EVMOS (\$16.91). The rates are the same as the supply section. Below these sections, there is a table for supplied assets: Evmos, Bitcoin, and AaveBridge USDC. Each asset shows its collateral status, APY (6.02%), and supplied value (1.66M \$11.37M). The total supplied amount is \$10,014.33. At the bottom, there are links for Documents, Legal Guidelines, Audit Reports, and Risk Assessment, along with social media icons for GitHub, LinkedIn, and YouTube.

This screenshot shows the 'Convert estTASHI to TASHI' interface. It asks the user to select a cooldown period. The minimum cooldown is 15 days, and the maximum is 180 days. The user has selected a 157-day cooldown period, which results in a 6.5% burn. The amount to be converted is 1234 estTASHI (\$126.91). The user has supplied 0.25 USDC, which is equivalent to 1 EVMOS (\$16.91). The available amount is 0.3779 EVMOS (\$6.41). The rates are the same as the main supply section. The user can click the 'Convert' button to proceed.

This screenshot shows the Tashi platform's supply and borrow interface, similar to the one above but with different values. The Net APY is 2.83%.
